Introduction

Frontend development is all about creating **interactive, visually appealing web applications**. This guide provides 10 practical projects for beginners to build skills, confidence, and a portfolio recruiters will notice.

Project 1: Personal Portfolio Website

- **Goal:** Showcase your skills, projects, and contact info
 - **Tech Stack:** HTML, CSS, JavaScript
 - **Takeaway:** Fundamental frontend skills + responsive design
-

Project 2: To-Do List App

- **Goal:** Add, delete, and mark tasks as complete
 - **Tech Stack:** HTML, CSS, JavaScript (DOM manipulation)
 - **Takeaway:** Interactive UI + JS logic
-

Project 3: Calculator App

- **Goal:** Basic arithmetic operations with clean UI
 - **Tech Stack:** HTML, CSS, JavaScript
 - **Takeaway:** Function logic + event handling
-

Project 4: Weather App

- **Goal:** Fetch live weather data using API
- **Tech Stack:** HTML, CSS, JavaScript, OpenWeather API

- **Takeaway:** API integration + dynamic data display
-

Project 5: Quiz App

- **Goal:** Multiple-choice questions with score tracking
 - **Tech Stack:** HTML, CSS, JavaScript
 - **Takeaway:** DOM manipulation + interactivity
-

Project 6: Expense Tracker (Frontend)

- **Goal:** Track income and expenses locally
 - **Tech Stack:** HTML, CSS, JavaScript, localStorage
 - **Takeaway:** Persisting data + dynamic UI updates
-

Project 7: Landing Page with Animation

- **Goal:** Create a responsive, animated landing page
 - **Tech Stack:** HTML, CSS, CSS animations or GSAP
 - **Takeaway:** Responsive design + smooth animations
-

Project 8: Movie Search App

- **Goal:** Search movies and display results dynamically
 - **Tech Stack:** HTML, CSS, JavaScript, TMDB API
 - **Takeaway:** API integration + frontend data rendering
-

Project 9: Image Gallery

- **Goal:** Display images with hover effects and filters
 - **Tech Stack:** HTML, CSS, JavaScript
 - **Takeaway:** UI design + JS interactivity
-

Project 10: Countdown Timer / Pomodoro App

- **Goal:** Track time for tasks or productivity

- **Tech Stack:** HTML, CSS, JavaScript
 - **Takeaway:** DOM manipulation + timers + logic
-

Key Tips for All Projects

- Keep code clean and modular
 - Test on multiple screen sizes (responsiveness)
 - Use Git & GitHub to track all projects
 - Deploy simple projects on **Netlify or Vercel**
 - Write README.md with project features and screenshots
-

Key Takeaways

- Practical projects solidify skills faster than tutorials
 - Cover **DOM manipulation, API integration, interactivity, and responsive design**
 - Portfolio should showcase **3–5 polished frontend projects**
 - Deployment + documentation = recruiter-ready projects
-
